

International Standards meeting comes to Sydney

The International Standards JTC1 SC25 WG3 Customer Premises Cabling is being hosted by Standards Australia and sponsored by VTI Services this week.

On the agenda for the meeting is the continuing development of one pair cabling systems in support of IEEE 802.3 CG and will also include in part remote power, sustainability, physical layer security and a revision of the testing of optical fibre cabling systems.

Australia will be presenting an end to end link test method along with test methods associated with various MPO installations.

The standards meeting will run from Monday 24th February 2020 till Friday 28th February 2020.

The number of international participants is likely to be impacted by the Coronavirus, however the meeting should still be effective at moving the standardisation process forward.
